CDMA 800MHz Ics Repeater, Mobile Signal Booster
2020/10/26

The ICS Repeater is working as a relay between the BTS and mobiles. It receives the low-power signal from BTS via the Donor Antenna, linearly amplifies the signal and then retransmits it via the Coverage Antenna to the weak/blind coverage area. And the mobile signal is also amplified and retransmitted to the BTS via the opposite direction. The Repeater is designed to provide a more cost-effective solution than adding a new Base Transceiver Station (BTS) to improve signal coverage and communication quality. Its easy installation and maintenance can help carrier get fast return. Features Aluminum-alloy casing with IP65 protection has high resistance to dust, water and corroding Real Time interference signal cancellation (Multi-path Fading, Feed-Back signal) greatly reduces system isolation requirement No interference to BTS by adopting linear amplifier with high gain and low noise Adopting filter with highly selectivity and low insertion loss eliminates interference between uplink and downlink RS-232 port provides a link to a notebook for local supervision or to the built-in wireless modem to communicate with the NMS (Network Management System) that can remotely supervise repeater's working status and download operational parameters to the repeater Applications To expand signal coverage or fill signal blind area where mobile signal is weak or unavailable. Outdoor: Airports, tourism regions, golf courses, tunnels, factories, mining districts, villages, Indoor: Hotels, exhibition centers, basements, shopping malls, offices, parking lots, etc. Technical Specifications Items Specifications Standard GSM CDMA WCDMA Working Frequency (customized) Uplink 890-915MHz 824-849MHz 1920-1980MHz Downlink 935-960MHz 869-894MHz 2110-2170MHz Working Bandwidth customized Max Input Power 13dBm Max Output Power 30-43dBm Gain ≥ 95 dB Gain Adjustment Range 1~31 dB @ step of 1 dB Voltage Standing Wave Ratio Noise Figure ≤ 5 dB In-band Ripple ≤ 3 dB Power Amplifier Oscillation Protection Interference Cancellation System Cancellation Feedback Signals $\geq 6\mu$ Sec Interference Cancellation Range ≥ 25 dB Error Vector Magnitude(EVM) $\leq 12.5\%$ Spurious Emission Within working band ≤ -15 dBm/30kHz Out of working band 9kHz~1GHz: ≤ -36 dBm/30kHz 1GHz~12.75GHz: ≤ -30 dBm/30kHz Third-order Inter-modulation ≤ -40 dBc / 30kHz (measured under rated output power) System Delay
